

What is the file repository?

The FDLP Desktop file repository is a single collection point for all documents that relate to the Federal Depository Library Program. The file repository does not contain publications that were distributed as part of the Program, but rather files that relate to the nature of the Program. Documents housed in the file repository are frequently included in articles and on other pages of the FDLP Desktop by the presence of a link to the file repository.

The following are among the types of files that can be found in the FDLP Desktop file repository:

- * Conference proceedings and handouts
- * White papers
- * High resolution Program graphics
- * DLC materials
- * Survey data

Organization of the File Repository

The file repository is located under "Home" > "File Repository" and is divided into categories and subcategories. The categories are based mainly on the FDLP Desktop site navigation.

Categories	Files
 About the FDLP Contains information about the Federal Depository Library Program	115
 Depository Administration Contains information about Depository Administration	36
 Collection Management Documents regarding the building, organizing and maintaining a tangible and electronic collection are located here.	1
 Outreach Includes events, online learning, partnerships, and promotional resources to promote the free use of Federal Government information products.	410
 GPO Cataloging Contains information about Government Printing Office Cataloging	1

Sorting and Access

Files are listed by default in date descending order. Other sorting options include by name and hits.

Spring DLC Meeting – Kansas City, MO

Documents		Sorting Options	Date added
Order by : Name Date Hits (Ascendant)			
	Transcripts of the Spring DLC Meeting		
Session Transcripts of the 2008 Spring DLC Meeting.			05/13/2008
	Download View Details		

File Type File Options Date Added

The repository offers two options for accessing the files. Users may click on the "View" button to open the file in their Internet browser window. The file may also be download by clicking on the "Download" button. More information about the file, such as file size, is available by clicking the "Details" button.

Searching

The file repository contains a search feature, which is accessible from anywhere in the repository from a top page navigation. The file repository is searchable both across the entire repository or with a particular category/subcategory. Keyword searches can be made across the document name, description, or both. However, the search feature does not search within the text of the document. Results may be ordered by date, category, popularity or alphabetically.
